## Search Notes

Dear Examiner Gibbs,

Here are the results of your search.

Please feel free to contact me if you have any questions.

**Toby Port**

Questions about the scope or the results of the search? Contact the searcher or contact:

Mary Hale, Information Branch Supervisor 308-4258, CM1-1E01

Voluntary Results Feedback Form
> I am an examiner in Workgroup: Example: 1610
> Relevant prior art found, search results used as follows:
☐ 102 rejection
☐ 103 rejection
☐ Cited as being of interest.
Helped examiner better understand the invention.
Helped examiner better understand the state of the art in their technology.
Types of relevant prior art found:
☐ Foreign Patent(s)
<ul> <li>Non-Patent Literature         <ul> <li>(journal articles, conference proceedings, new product announcements etc.)</li> </ul> </li> </ul>
> Relevant prior art not found:
Results verified the lack of relevant prior art (helped determine patentability).
Results were not useful in determining patentability or understanding the invention.

Gibbs, Terra

Sent: To: Subject: Sunday, November 09, 2003 2:54 PM STIC-Biotech/ChemLib Sequence search request...

RECEIVED

Could you please do a regular search of SEQ ID NOs: 1 and 2 of USSN 10/005337?

(STIC)

Also could you please search do an oligomer search SEQ ID NOs: 1 and 2, length limited to 50 nucleobases or less.

Thank You.

Terra Cotta Gibbs, Ph.D. Art Unit 1635 CM1, 12A12 703-306-3221

Schreiber, David

Subject:

Sequence search request...

Hi David, I have a sequence search request.

NO CRF

The request is for % identity of SEQ ID NOs: 1 and 2 of USSN 10/005337 to SEQ ID NO:3 of PCT US99/20730.

I need SEQ ID NO:1 to be at least 93% identical with SEQ ID NO:3. I also need SEQ ID NO:2 to be at least 80% identical with SEQ ID NO:3.

NO 60/097,960

Is this possible? Thank You!

Terra Cotta Gibbs, Ph.D. Art Unit 1635 CM1, 12A12 703-306-3221 Run 59 12 2

/robe="Organ: pooled; Vector: pT7T3D-Pac (Pharmacia) with a modified polylinker; Site 1: Not I; Site 2: Eco RI; Equal amounts of plasmid DNA from three normalized libraries (fetal lung NbHL19W, testis NHT, and B-cell NCI CGAP GCBI) were mixed, and ss circles were made in vitro. Following HAP purification, this DNA was used as tracer in a subtractive hybridization teaction. The driver was PCR-amplified cDNAs from pools of 5,000 clones made from the same 3 libraries. The pools consisted of 1.MA-G.E. clones 297480-302087, 682632-687239, 726408-728711, and 729096-731399. Subtraction by Bento Soares and M. Fatima Bonaldo.

```
(http://www.jax.org/resources/documents/dnares/). The DNA was hydrodynamically sheared by repeated passage through a 0.005 inch orifice at constant velocity. The sheared DNA was blunt end-repaired with 74 DNA polymerase and 74 polymerase and 74 polymerase ared with 74 DNA polymerase and 74 polymerlectide kinase. Adaptor oligonuclectides were ligated to the blunt ends in high molar excess. The adaptored DNA was purified and size-selected for a 9.5 to 10.5 kb range using preparative agarces gel electrophoresis. Vector DNA was prepared from a derivative of pwD42 (gil/473114) gbl/AR129072.1), a copy-number inducible derivative of plasmid R1. The vector was ligated with adaptors complementary to the insert adaptors and purified. The sheared, adaptored mouse DNA was annealed to adaptored vector DNA, and transformed into capacity competent E. coli XL10-Gold (Stratagene) cells and selected for ampicillin resistance."
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          240 AGATGAAGAGCAATGAAAATAGTAATGACTCTGTTTGCTTCAGCAGGACATATACTAA 299

Sequence 3, Application US/09740041
Patent No. 6562593
GENERAL INFORMATION
GENERAL INFORMATION
TITLE OF INVENTION: ISOLATED HUMAN TRANSPORTER PROTEINS,
TITLE OF INVENTION: NUCLEIC ACID MOLECULES ENCODING HUMAN TRANSPORTER PROTEINS,
TITLE OF INVENTION: AND USES THEREOF
FILE REFERENCE: CLOONO1
CURRENT APPLICATION NUMBER: US/09/740,041
CURRENT FILING DATE: 2000-12-20
NUMBER OF SEQ ID NOS: 4
SOFTWARE: FastSEQ for Windows Version 4.0
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                    TCCTGACTTAGGTGATCCGCCCACCTCGGCCTCCCAAACTGTTGGGATTACAAGCATAAG 40246
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  APPLICANT: Korneluk, Robert G
APPLICANT: MacKenzie, Alexander E
APPLICANT: Liston, Peter
APPLICANT: Liston, Stephen
APPLICANT: Tsang, Benjamin K
APPLICANT: Tsang, Benjamin K
APPLICANT: Trang, Benjamin K
APPLICANT: Trang, Benjamin K
APPLICANT: Trang, Benjamin K
APPLICANT: Dratt, Christine
TITLE OF INVENTION: DRESCTION AND MODULATION OF IAPS AND
TITLE OF INVENTION: NAIP FOR THE DIAGNOSIS AND TREATMENT OF PROLIFERATIVE
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              40127 TAATTTTTGTATTTTTGGTAGAGATAGGATTTTGCCATGTTGGCCAGGCTGGTCTCGAAC

Patent No. 6492153
GENERAL INFORMATION:
APPLICANT: ABU-THREIDEH, Jane et al
TITLE OF INVENTION: ISOLATED HUMAN KINASE PROTEINS, NUCLEIC
TITLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TILLE OF INVENTION: ACID MOLECULES ENCODING HUMAN KINASE PROTEINS, AND USES
TILLE REFERENCE: CL001043
CURRENT APPLICATION NUMBER: US/09/759,359A
CURRENT FILING DATE: 2001-01-16
NUMBER: OF SEQ ID NOS: 3
SOFTWARE: FastSEQ for Windows Version 4.0
SEQ ID NO 3
LENGTH: 90541

No. is the number of results predicted by chance to have a score greater than or equal to the score of the result being printed, and is derived by analysis of the total score distribution.
                                                                                                                                                                                                                                                                          1 ctgcagcaagttacttaatg.....acaaġactccttcagccaac 2074

GENERAL INFORMATION:

APPLICANT: Lalgudi, Raghunath V.

APPLICANT: Kamigaki, Laura Y. (Ito)

APPLICANT: Sherman, Bradley K.

TITLE OF INVENTION: POLYNOLICEOTIDES AND POLYPEPTIDES DERIVED FROM CORN SEEDLING

FILE REFERENCE: PL.0012-1 CON

CURRENT FILING DATE: 2001-08-06

PRIOR FILING DATE: 1999-04-21

PRIOR FILING DATE: 1999-04-21

PRIOR FILING DATE: 1998-06-05

NUMBER OF SEQ ID NOS: 6332

SOFTWARE: PERL PROGRAM

SEQ ID NOS: 6332

SEQ ID NO 5218

```

```
The present invention provides the protein and coding sequences of human mitotic cycle regulation protein 9. The sequences can be used in the treatment of canner, haemopathy, HIV infection, immunological diseases and inflammation. The present sequence is a probe for the coding sequence of the invention.
                                         Human mitotic cycle regulation protein 9 and encoded polynucleotide, used in diagnosis and treatment of malignant tumors, hemopathy, human immunodeficiency virus infection, immunological diseases and inflammation -

This is an AU-rich element (ARE) sequence used in competition studies to devaluate the role of ARE proteins in the process of RNA deadenylation or degradation. It is thought that AREs influence mRNA degradation rates. The invention relates to an in vitro system (consisting of a cell extract and an exogenous target RNA) that is able to recapitulate regulated RNA turnover of the target RNA. The system is used to dentify agents that modulate stability, deadenylation or degradation of the target RNA, or endogenous molecules that participate in deadenylation/degradation of the target RNA. These modulators e.g AREs are preferably involved in cell growth and differentiation in mammals, especially where these processes are implicated in cell transformation and immune system dysfunction and
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          AU rich element, ARE, adenylation, differentiation, rheumatoid arthritis, transcription template, inflammatory bowel disease, ss.
                                                                                                                                                                 This is a TNF-alpha mRNA target sequence (nucleotide no. 1344) of an enzymatic RNA molecule (ribozyme) which cleaves mRNA associated with the development or maintenance of a psoriatic or asthmatic condition. The concn. of the ribozyme necessary to effect a therapeutic treatment is lower than that of an antisense oligonucleotide and the specificity of action is higher.
                                      Enzymatic RNA molecules which cleave mRNA - used to treat or prevent inflammatory, arthritic, stenotic or cardiovascular diseases
                                                                                                                                                                                                                                                                                                                                                                                                                       Gaps
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            In vitro system for studying regulated RNA turnover, containing cell
extract and target RNA, for identifying modulators of RNA stability,

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                  ö
                                                                                                                                                                                                                                                                                                                                                                                                               This invention describes a novel human 2-hydroxy acid dehydrogenase 16, its recombinant production, its encoding polymorlecticide and application and a 2-hydroxy acid dehydrocgenase 16 antagonist. The polypeptide is useful for treating cancer, haemopathy and human immunodeficiency virus infection. This sequence represents a PCR primer used in the amplification of the human 2-hydroxy acid dehydrogenase 16 described in the method of the invention.
                                                                                                                                                                                                                                                                                      New human 2-hydroxy acid dehydrogenase 16 and encoding polynucleotide, useful for treating cancer, haemopathy and human immunodeficiency virus

The expression vectors comprise transcribable polynucleotides having sequences of nucleotides encoding KNA elements which modulates the stability of a transcript corresponding to the transcribable polynucleotide. The expression vectors are useful for modulating the stability of a transcript and determining expression
                                                                                                             untranslated region (3'UTR) of human tumour necrosis factor mRNA.

The presence of AU-rich elements (ARBS) in eukaryotic mRNAs correlates with rapid mRNA turnover and post-translational control.

The ARB consists of multiple AUUVA motifs or sequences resembling it. A similar ARE sequence is found in the 3' UTR of the human melanoma differentiation associated gene-7 (Mda-7) gene (see AAH26596). The invention provides recombinant expression constructs in which the human Mda-7 promoter (see AAH26595) is operably linked to a coding sequence encoding a tumour suppressor protein. A pharmaceutical composition including the recombinant expression construct is used in a claimed method of treating melanoma, neuroblastoma, astrooftoma, glioblastoma multiforme, cervical cancer, colon cancer, prostate cancer, osteosarcoma, chondrosarcoma or a cancer of the central nervous system.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          expression; transcript stability; drug screening; AU-rich element; tumour necrosis factor; TNF; ds.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             The present invention relates to novel expression vectors and/or reporter vectors providing kinetics of protein expression with improved temporal correlation to the promoter activity. The expression vectors comprise transcribable polymucleotides having sequences of nucleotides encoding RNA elements which modulates the stability of a transcript corresponding for modulating the stability of a transcript and determining expression of a polymucleotide of interest. They are useful for modulating gene expression, identifying and analysing regulatory sequences, new targets and reagents for treating human diseases and for drug screening. The present sequence is tumour necrosis factor (TNP) ARE (AU-rich element) RNA. This sequence is used in the exemplification of the invention.

of a polynucleotide of interest. They are useful for modulating gene expression, identifying and analysing regulatory sequences, new targets and reagents for treating human diseases and for drug screening. The present sequence is tumour necrosis factor (TNF) ARE (AU-rich element) DNA. This sequence is used in the exemplification of the invention.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       New expression vector useful for modulating gene expression, identifying and analyzing regulatory sequences, new targets and reagents for treating human diseases, comprises a transcribable

```
The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl Nydrocarbon nuclear transporter (ARNY) gene, an integrin subunit beta 3 gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16675 to AAA17165 to AAA1762 represent ribozyme sequences for AAA1769 to AAA1769 and AAA1168 to present their corresponding target sequences; AAA11685 to AAA19185 to AAA2189 and AAA2189 to AAA2180 to AA
                                                                                                                                                                                                                                                                                                                                                   Human; aryl hydrocarbon nuclear transport; ARNT; TIE-2; angiogenesis; integrin alpha 6 subunit; integrin subunit beta 3; hairpin ribozyme; hammerhead ribozyme; angiogenic factor; cytostatic; antidiabetic; ophthalmologic; antiinflammatory; antiarthritic; antipsoriatic; ARMD; dermatological; RNA cleavage; cancer; diabetic retinopathy; arthritis; age related macular degeneration; inflammation; neovascular glaucoma; myopic degeneration; psoriasis; verruca vulgaris; angiofibroma; tuberous sclerosis; pot-wine stain; Sturge Weber syndrome; ss. The present invention describes enzymatic nucleic acid molecules with Max Cheaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin subunit beta 3 gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tia-2 gene. This is a transcription template sequence for an AU rich element (ARE)

protein. The synthetic oligonucleotide is used in evaluation of the role

of ARE proteins in the process of RNA deadenylation or degradation. It is

thought that AREs influence mRNA deadenylation or degradation. It is

thought that AREs influence mRNA deadenylation or degradation. It is

to an in virro system (consisting of a cell extract and an exogenous

crarget RNA) that is able to recapitulate regulated RNA turnover of the

target RNA. The system is used to identify agents that modulate

stability, deadenylation or degradation of the target RNA. These modulators e.g AREs are preferably involved in cell growth and

fiferentiation in mammals, especially where these processes are

implicated in cell transformation and immune system dysfunction and are

potential therapeutic agents, e.g. in conditions associated with abnormal

expression of tumour necrosis factor-alpha. Examples of such diseases. The

include sepsis, rheumandation arthritis or inflammatory bowel disease. The

system can also be used diagnostically to detect the molecular defects in

cut conditions and for development of improved gene delivery systems.

The protein has a molecular weight of 13 kD. The invention also relates to a method for the recombinant production of the protein, an antagonist of the protein, and the use of the protein, gene and antagonist in therapeutic applications. DNA topoisomerase II 12.76 can be used in the treatment of a variety of diseases such as malignant tumours, blood diseases, HIV (human immunodeficiency virus) infection, immune disorders and inflammatory conditions. Sequences ABQ77984 sepresent PCR primers used in an exemplification of the invention to amplify DNA topoisomerase II 12.76
                                                                                                                                                                                                                                                                                    DNA topoisomerase II 12.76; recombinant production; gene therapy; malignant tumour; cancer; blood disease; HIV infection; human immunodeficiency virus; immune disorder; inflammatory condition; cytostatic; antiinflammatory; immunomodulator; PCR; primer; ss.

```
The present invention describes enzymatic nucleic acid molecules with CRNA cleaving activity, which specifically cleave RNA encoded by an aryl hydrocarbon nuclear transporter (ARNT) gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA17675 and AAA17661 to AAA17623 to AAA17684 represent their corresponding target sequences AAA17685 to AAA181836 and AAA19087 to Corresponding target sequences; AAA19154 represent riboxyme sequences for Tie-2, and AAA18186 to AAA19086 and AAA19155 to AAA19223 to AAA20361 to AAA21595 represent their corresponding target sequences; CC AAA19155 to AAA21680 represent triboxyme sequences for integrin alpha 6 subunit, and AAA21502 to AAA21500 and AAA21596 to AAA21680 represent their corresponding target sequences; CC AAA21595 to AAA21501 to AAA21591 represent riboxyme sequences for integrin subunit beta 3, and AAA23476 to AAA21342 represent their corresponding target sequences; CAAA21592 to AAA2159 to AAA22334 to AAA2159 to AAA2159 to AAA2159 to AAA2159 to AAA2159 to The invention are used for modulating the synthesis, expression and/or stability of an mRNA encoding angiogenic factor, especially ase related contegrin subunit beta 3, integrin subunit alpha-6, or Tie-2. They are especially used to treat cancer, dabetic retinopathy, age related concerned angular degeneration (ARND), inflammation, and archritis, as well as conceved and others syndrome, of tuberous sclerosis, pot-wine stains, Sturge Weber conductor and diseases related to the levels of ARNT, Tie-2, and other syndromes and diseases related to the levels of ARNT, Tie-2, and others syndromes and others concerned to the levels of ARNT, Tie-2, and others syndromes and others concerned to the levels of ARNT, Tie-2, and others syndromes and others and others.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ö
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        ..
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                       Length 17;
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   Indels
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                          integrin subunit alpha-6, or integrin subunit beta-3

The present invention describes enzymatic nucleic acid molecules with RNA cleaving activity, which specifically cleave RNA encoded by an aryl Nydrocarbon nuclear transporter (ARNY) gene, an integrin subunit beta 3 gene, an integrin subunit beta 3 gene, an integrin alpha 6 subunit gene, or a Tie-2 gene. AAA16775 to AAA17651 to AAA17651 to AAA17655 and AAA17684 represent their corresponding target sequences; AAA17685 to AAA18385 and AAA19087 to AAA19155 to AAA419522 represent their corresponding target sequences; and AAA41055 to AAA41955 to AAA41688 represent their corresponding target sequences; AAA21689 to AAA421631 and AAA21635 to AAA21635 to AAA21639 to AAA421635 and AAA21635 to AAA21639 to AAA421635 and AAA21635 to AAA21639 to AAA21635 and AAA21635 to AAA21639 to AAA421635 to AAA21639 to AAA421635 to AAA23163 to AAA23162 to AAA23163 to AAA23163 to AAA23163 to AAA23162 to AAA23162 to AAA23163 to AAA23162 to AAA23163 to AAA23162 to AAA23162 to AAA23162 to AAA23163 to AAA23162 to AAA23163 to AAA23162 to AAA23163 to AAA2316 integrin subunit alpha-6, or integrin subunit beta-3

AU264662 3 10-MAY-2002 AU264662 VS Dictyostelium discoideum cDNA clone VSD856 5', mRNA sequence.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              Dictyostelium discoideum
Dictyostelium discoideum
Eukaryostelium discoideum
Eukaryostelium, discoideum
1 (bases 1 to 38)
Urushihara, H., Morio, T., Saito, T., Koriki, E., Ochiai, H., Maeda, M., Takeuchi, I., Kohara, Y. and Tanaka, Y.
Population analysis of CoNAs from unicellular and multicellular stages of Dictyostelium discoideum
                                                                                                                                                                                                                                                                                                                                                                                                        double-stranded cDNA was ligated to Eco RI adaptors (Pharmacia), digested with Pac I and cloned into the Pac and Eco RI sites of the modified pT/T3 vector. Library went through one round of normalization. Library constructed by Bento Soares and M.Fatima Bonaldo."

Submitted (21-007-2002) Weisshaar B., Max-Planck-Institut fuer Submitted (21-007-2002) Weisshaar B., Max-Planck-Institut fuer Suechtungsforschung, Carl-von-Linne-Weg 10, Koeln, 50829, Germany This sequence is recovered from the left border of the T-DNA. It indicates an insertion within the locus defined by clone MCK7. The sequences are generated at the MPI for Plant Breeding Research in the context of the GABI-Kat project. GABI-Kat is part of the German Plant Genomics program designated 'GABI'. Information on line availability can be found at:
